EDUCATION

VIT University

B.Tech, Computer Science Engineering — CGPA: 8.01

2023 – 2027

Bhopal, MP

TECHNICAL SKILLS

Languages : C++

Backend : Node.js, Express.js, Flask, REST APIs, JWT Authentication, Prisma ORM

Databases : PostgreSQL, SQLite, Firebase

Frontend : React.js, Tailwind CSS

Tools : Git, GitHub, VS Code

PROJECTS

Persona | Full-Stack Anonymous Community Platform

Node.js, Express, PostgreSQL, Prisma, React, JWT

- Architected a full-stack anonymous discussion platform across 7 seeded communities (Career, Tech, Startups, Finance, etc.), giving users persistent pseudonymous identities without exposing real accounts
- Designed a self-referencing Prisma comment model to support threaded, nested discussions, and wrapped reaction and trust-score updates in atomic \$transaction blocks to keep scores consistent under concurrent writes
- Built a pre-save privacy-leak detector that scans post content before persistence, decoupled from publish policy so moderation rules can evolve independently of the write path
- Hardened the API with JWT-based role authentication, Helmet security headers, and express-rate-limit throttling to mitigate abuse and brute-force attempts
- Enforced anonymity at the data layer using Prisma select-level field exclusion (not app-side filtering), with slug-based community routing and idempotent upsert seed scripts for reproducible deploys

BreakCase | DSA/CP Error Hunting Platform

React 19, TypeScript, Vite, Tailwind CSS, Node.js, Express,
Prisma, C++17

- Built a competitive programming platform where users find valid counterexamples that break seemingly correct C++17 solutions
- Implemented interactive problem rendering, Monaco code viewing, input validation, and progress tracking with a React/TypeScript frontend and Express/TypeScript backend
- Built a server-side C++17 execution pipeline using g++ -O2, Node.js child processes, execution timeouts, and output limits for counterexample verification

COCURRICULAR

Health Hackathon — Finalist

- Reached the final round with a mental healthcare platform, out of 100+ competing teams

Startup Pitch Competition — 1st Place

- Won first place pitching BrightBuddy, a mental wellness platform, against competing teams

Competitive Programming

- Participated in 20+ contests across CodeChef and Codeforces, achieving a CodeChef rating of 1217 and a Codeforces rating of 850
